

gut or got?

how the real nerds hold it

ZSH

```
host@user$ zsh
```

zprezto

```
git clone --recursive https://github.com/sorin-ionescu/prezto.git "${ZDOTDIR:-$HOME}/.zprezto"
```

```
less README.md
```

Change shell!

```
chsh -s /bin/zsh
```

```
usermod -s /bin/zsh
```

Add completion

- `cat ~/.zpreztorc`

```
zstyle ':prezto:load' pmodule \  
  'environment' \  
  'terminal' \  
  'history' \  
  'directory' \  
  'spectrum' \  
  'utility' \  
  'completion' \  
  'syntax-highlighting'
```

Enjoy

```
~ > gut status  
zsh: correct gut to git [nyae]? █
```

And

```
(fevent)fevent git:master > fab deploy testing
```

```
git:master > git status
```
